"I prefer to think of it as added value."

## Layman's Guide to Data Value

- consider data as
  - an asset
  - an entity
- track of data
  - cycles
  - flows
  - chains
  - networks

"Investigating Conditional Data Value Under GDPR"

<http://openscience.adaptcentre.ie/> Harshvardhan J. Pandit [pandith@tcd.ie](mailto:pandith@tcd.ie) @coolharsh55

presented at Governing Value: The Practice of Exploiting Data Value Workshop Co-located with SEMANTICS 2018

core & implicit assumption  
that data will always  
be available

BUT

What if the data  
that is available

now

may not be  
available

later

??? ??? ???

have value today

loss of value tomorrow

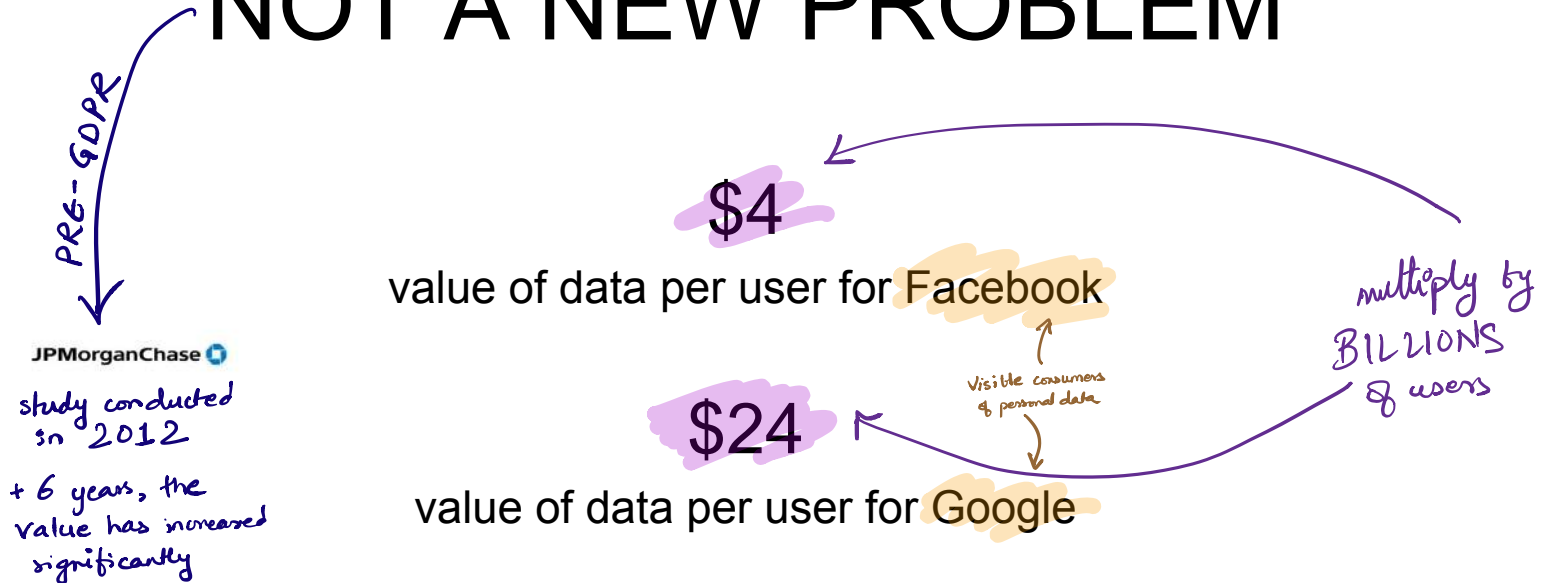

does not  
apply to open data!

## Assumptions / Conditions / Specificity

1. consider dealing with personal data
2. personal data is governed by data protection laws
3. laws such as the **GDPR** affect data availability

→ personal data becomes unusable from the legal basis p.o.v.

## NOT A NEW PROBLEM

- Given Consent → prior to data collection
- Right to Withdraw Consent → at any time!
- Right to be forgotten → delete retrospective data
- (Pseudo-)Anonymisation → enforced legally
- Obligations → on data consumers

## ① Availability

> is the data available?

## ② Conditionality

> when is the data available?

> what events trigger these conditions?

> how to incorporate them into data value frameworks?

↓  
methods  
approaches  
systems  
pipelines

*based on* →

[12] Lim, C., Kim, K.H., Kim, M.J., Heo, J.Y., Kim, K.J., Maglio, P.P., 2018. From data to value: A nine-factor framework for data-based value creation in information-intensive services. International Journal of Information Management 39, 121–135.

## Initial attempt using data-based value framework

*expanded into* →

- (i) data collection
- (ii) information creation
- (iii) value creation
- (iv) distribution through the provider network

*from [12]*

- (1) data source
- (2) data collection
- (3) data (artefact)
- (4) data analysis
- (5) information on the data source
- (6) information delivery
- (7) customer (information user)
- (8) value in information use
- (9) provider network

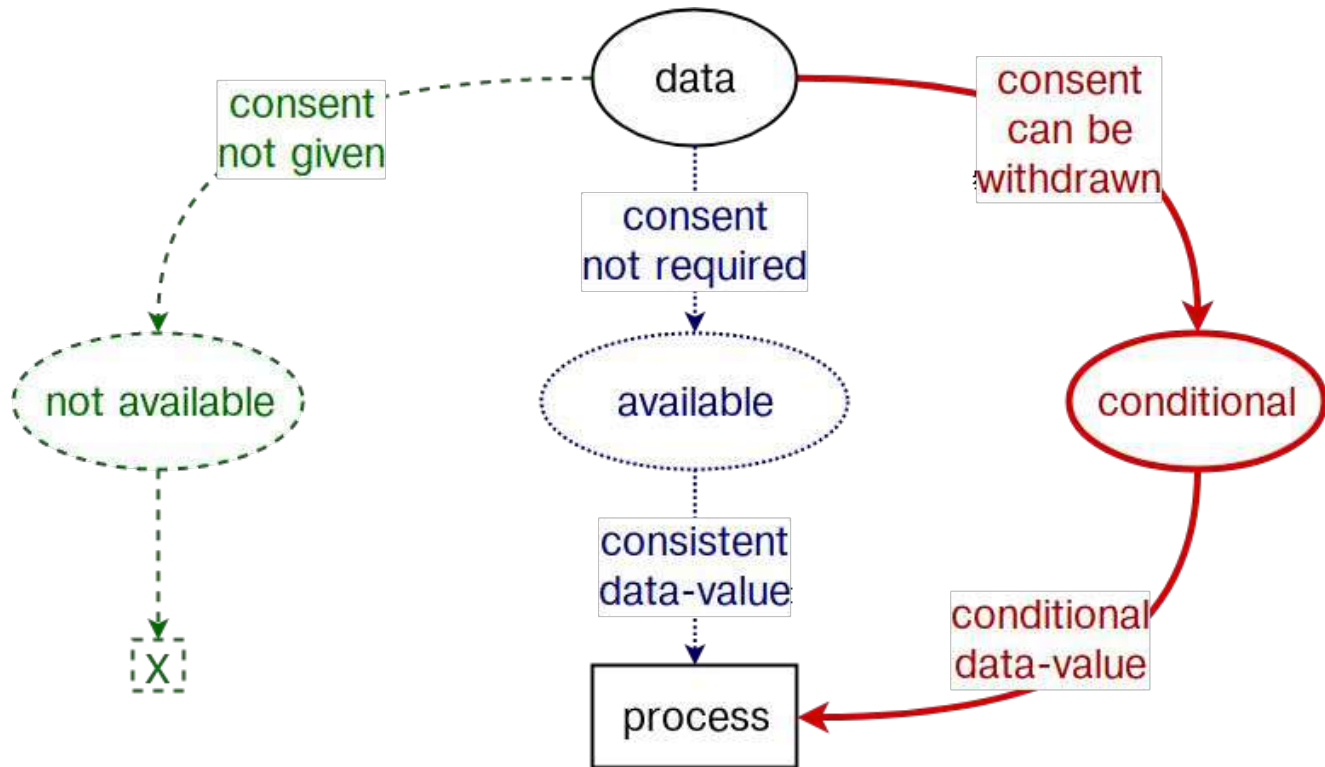

**(10) data availability.**

**PROPOSED  
ADDITIONAL  
METRIC**

1. Identify processes that use conditional data  
*activities that depend or are enriched by this data*
2. Quantify (if possible) the conditionality and availability  
*events that trigger*
3. Find alternate means to maximise value  
*this is already being done, but not formalised from the data value POV*

# Fallback analogy to oil

REDUCED  
KNOCKING

tetraethyl-lead

ENVIRONMENTAL  
HAZARD

BANNED IN ~1970's

Lessons to learn

(a) value of petrol

(b) innovation

(a) Normal combustion

(b) Premature combustion

lead in air
